

ARPI and The Brenva Institute Announce a Partnership in 'Leadership Thinking'

The Australian Risk Policy Institute (ARPI) as convener of the Global Risk Policy Network (GRPN) proudly announces a partnership with The Brenva Institute in the United States, a global think-tank focusing on strategic leadership. Brenva is led by Professor Robert Glaze, Fellow of ARPI and ERPI within the global network, and has links with Oxford University. Professor Glaze is the author of Leadership 4.0 – 'Leadership in the Age of Digital Convergence.'

Tony Charge, Chair of ARPI said that "ARPI is extremely pleased to enter a partnership with Brenva, as the essence of Strategic Risk Policy is the new relationship created between leaders and risk. Strategic Risk Policy illustrates how leaders must embrace paradigm change to be sure of receiving the right information and in a timely manner, for informed decision-making and avoiding a failure to act faster."

"We are consequently very happy to announce the launch of the joint 'Centre for Advanced Risk Policy Studies' (CARPS) to promote the further integration and benefits of the new relationship between leaders and Strategic Risk Policy" said Mr Charge.

"It is with sincere gratitude I thank the Australia Risk Policy Institute as convener of the Global Risk Policy Network, both led by Tony Charge, on the joint venture with The Brenva Institute to create the Centre for Advanced Risk Policy Studies (CARPS)' said Professor Robert Glaze, who continued:

"As the Chairman and Primary Project Leader for CARPS I will be leading the thinking to engage in the global study of Strategic Risk Policy development and decisions with their impact on real time and future human and biophysical environments. Through this emphasis at the organism, ecosystem and biome levels of evolving complexity, we will seek to better understand and apply the role of Strategic Risk Policy architectures to challenges of the human ecosystem, its environmental blueprints, ecosystem infrastructure and socioeconomic structures."

"CARPS will develop and incorporate the next generation of traditional and modern general systems theory in addressing the nature of what constitutes risk. The corporate, industry, government, economic and scientific frameworks risk components and their application at the national, regional and global level will be beneficiaries. A Unified Theory of Risk within Strategic Risk Policy as manifested by the human organism and ecosystem emergence on the earth will be a major area of study" Professor Glaze added.

"The Australia Risk Policy Institute will be the primary partner of CARPS in the development dissemination, distribution and convener of its various forms of outputs. We look forward to driving the global conversation on the evolving resilience of the biological creature we call "Human" concluded Professor Glaze.
