
ARPI® PERSPECTIVE

Introducing PerilScope™ Strategic Intelligence

Seeing the pattern beneath events

In a world of accelerating geopolitical, technological, climatic and societal change, leaders increasingly face a problem that conventional risk reporting struggles to solve: individual events may be visible, but the larger pattern connecting them often is not.

ARPI®'s affiliated European Risk Policy Institute (ERPI), part of the Global Risk Policy Network, has developed **PerilScope™ Strategic Intelligence** as a continuing strategic-intelligence capability for examining how pressure moves through interconnected systems, institutions and societies — and what those changing conditions mean for leadership and decision-making.

PerilScope™ complements the innovative and transformative Strategic Risk Policy® (SRP) approach by looking ahead, revealing consequences of foreseeable events identified through the lens of vulnerabilities and interdependencies developing around them. It evidences SRP Foresight.

Its continuing intelligence record includes **Signal 12**, regional strategic perspectives, longer-form analysis and **The Worried Optimist** — a distinctive examination of resilience, human agency and the choices that remain available even under increasing systemic pressure.

PerilScope™ is not designed to predict the future. It is designed to improve the quality of strategic awareness: distinguishing signal from noise, temporary disruption from structural change, and visible events from the conditions that may determine their consequences.

ARPI® is pleased to provide direct access to this ERPI capability through its website as part of the continuing development of the **Global Risk Policy Network**.
